PRR for Constructive Automation

└ Automation for Programming Languages

└ Type inference and term synthesis^a

8/10 - 4 min / 34 min total

1. proof search for automaton
2. why proof relevant? verification
3. proof carrying architecture
4. implementation

```
data OddList a = OCons (EvenList a)
data EvenList a = Nil | ECons (OddList a)
```

```
instance (Eq a, Eq (OddList b)) => Eq (EvenList b)
instance (Eq a, Eq (EvenList b)) => Eq (OddList b)
```

```
data Bush a = Nil | Cons (Bush (Bush a))
instance (Eq a, Eq (Bush (Bush b))) => Eq (Bush b)
```

³<https://github.com/frantisekfarka/cotcr>

Automation for Programming Languages

Type class resolution^a

2019-04-29

9/10 - 4 min / 38 min total

1. possibly nonterminating - coinduction
2. proof system extends
3. semantical considerations - coinductive models
4. proof-relevance helps
5. simple = cycles in HC, more complex - need HH
6. where next

Where to Next

Applications

- coinductive proof-search for parallel and distributed computation
- constrained Horn clauses for resource-aware computation
- automation for e.g. dependently type-based probabilistic programming

Theory of proof search

different classes of sequents for efficient search space

Applications
